For Diaper Dermatitis Complicated by Candidiasis, An Effective 3-in-1 Therapy

VUSION® Ointment (0.25% miconazole nitrate/15% zinc oxide/81.35% white petrolatum)

Please see Important Safety Information on back page and accompanying Full Prescribing Information.
With the triple protection of its combined ingredients, VUSION® Ointment (0.25% miconazole nitrate/15% zinc oxide/81.35% white petrolatum) clears the Candida infection found in more than 40% of diaper dermatitis, creates the needed barrier enforcement, and provides moisture. Indicated for the adjunctive treatment of diaper dermatitis only when complicated by documented candidiasis, VUSION Ointment is prescribed for immunocompetent pediatric patients 4 weeks and older.

The ointment is applied at each diaper change for 7 days. It should be used as part of a treatment regimen that includes gentle cleansing of the diaper area and frequent diaper changes. If irritation occurs, or if the rash worsens, treatment should be discontinued.

Before starting treatment with VUSION Ointment, the presence of Candida infection should be established by microscopic evidence of pseudohyphae and/or budding yeast. A positive fungal culture for Candida albicans is not an adequate evaluation of candidal infection, since colonization with C. albicans can result in a positive culture.

Please see Important Safety Information on back page and accompanying Full Prescribing Information.
With Prestium Pharma’s Prescription Savings Program, your patients can save up to $45 off out-of-pocket costs each time their pharmacist fills or refills the prescription. **Ask for a supply of Prescription Savings Cards (see sample below) to provide your patients with their script.**

The cards are valid at participating pharmacies for one use per medicine per month. Not valid for patients under Medicaid, Medicare (including Medicare Part D), or similar state or federal programs. The card is not valid for residents of Massachusetts unless the patient is paying the full cost of the prescription.
How the Prestium Pharma Combo Savings Card Works for Your Patients:

• Pay the initial $15, you could receive up to $45 off your co-pay or out-of-pocket expenses.

• You may pay more than $15 if your co-pay exceeds $60; if your insurance does not cover Denavir, Elimite, Evoclin, Extina, Luxiq, Olux, Olux-E, or Vusion; or if you are a cash payer.

• Go to www.PrestiumPharma.com for more information.

• For assistance with the Prestium Pharma Combo Savings Card, contact 1-855-820-3232.

• After each transaction, keep this card for up to 12 total uses.
IMPORTANT SAFETY INFORMATION

Please see accompanying Full Prescribing Information

- **VUSION®** Ointment (0.25% miconazole nitrate/15% zinc oxide/81.35% white petrolatum) is for topical use only and not for oral, ophthalmic, or intravaginal use.

- It should not be employed as a diaper dermatitis preventive in either infants or adults, as its prophylactic use may result in the development of drug resistance.

- VUSION Ointment should not be used as a substitute for frequent diaper changes.

- The safety of VUSION Ointment when used longer than 7 days is not known.

- Its safety and efficacy have not been demonstrated in immunocompromised patients, incontinent adults, or infants less than 4 weeks of age (premature or term).

- There are no adequate and well-controlled studies of VUSION Ointment in pregnant women or studies on the presence of its active components in breast milk. Pregnant women and nursing mothers should be counseled to exercise caution when administering the product.
